Skills

- Python, Rust
- PostgreSQL
- Docker
- Ansible
- Linux (CLI tools, scripting)
- Vue.js, CSS
- GIT, CI (Gitlab)
- L^AT_EX
- team leading
- customer needs understanding
- project management in general
- leading not bossing

Recent projects

- t-business.cz
- navystavisti.cz
- novaspirala.cz
- nordictelecom.cz

Experience

09/2010 - present

I have been part of a lot of teams, led a few, or I've worked as a single unit. My main workload contains of custom web apps, mainly intranet, CRM-like or cloud apps. As apps shifted from desktop towards web I was a part of this transformation for past decade and helped many companies to go through this transition. Companies like:

- Credit Czech s.r.o.
(biggest employment agency in CZ)
- CVUT
(Czech technical university)
- Elephant Orchestra

- (biggest lead generation in CZ)
- CSOB (biggest Czech bank)
- Proboston Creative s.r.o. (T-mobile supplier)
- and more...

Technologies we have used:

- Python (Django, Flask, Django CMS, Wagtail, pure Python)
- Django REST framework
- Airflow
- Docker
- Linux
- MySQL, Postgres, MongoDB, Redis, RabbitMQ
- Pug
- Javascript
- SASS, Less
- Common server management (Debian based)
- LaTeX, Markdown, reStructuredText

Past (2010-2013)

I've been part of UK startup backed by one of the most known UK architect. Our goal was to bring a new cooperation tool for architect/design studios. We have cooperated with developers from USA

Another experience was to develop and push forward a framework which was used as a base for 50+ lead gen. websites. The framework was a hard to the whole business since it also managed data flow (inc. transformation and validation) of all leads which flowed through the entire system.

- PHP 5
- Symphony Framework
- Zend Framework
- no framework at all
- Zero MQ
- PostgreSQL
- MySQL
- Apache server
- Apache Solr
- Linux (Debian) servers

Prior aforementioned working experiences I was focused mainly on self studying, gaining first working experiences as PHP developer in a couple of smaller agencies and studios. I have gained very valuable informations and experiences as well as good advices from more experienced colleagues which path should I take as a developer in general.

Education

VSMIE / University

Management economy & information technology

- Accounting
- business economy
- macro/micro economy

SOS a SOU Weilova / High school

Information technology

- C/C++
- Assembler
- Web technologies (HTML, CSS, Javascript)
- Office tools
